Foreword by Sergey Ivashchenko Author: You have already studied the Manual of Chess Combinations I and can solve simple exercises in which the goal can be achieved after 1-3 correct moves. The time has come for the next step - to learn and solve more complex tasks where deeper reflection is required. Such combinations and maneuvers can bring not only victory, but also aesthetic pleasure, and thanks to books and magazines they are forever kept in the treasury of chess. Our new book also includes combinations that have occurred in the games of famous players, including outstanding masters past and present. There are also many specially composed positions, not training exercises, but artistic compositions called research. In them, ideas are usually expressed in a cleaner and more memorable form than in practical games. As in our previous book, the educational material is located in sections of increasing complexity. A study of each section can be approximated as adding 100 points to your ranking. Thus, our book should lead you up the steps of chess skill from the rating of 1600-1700, which means knowledge of the rudiments of the game, to a solid level of 2200 points or more, which in practice roughly corresponds to the level of the candidate in the master. The book completes the author's 25-year work on the creation of a guide to chess tactics. Of course, only with tactics you will not defeat all your rivals, but without tactics nothing do in chess. Tactics are perhaps the most beautiful and attractive attractive chess, especially at the beginning of school. I hope that studying this book will strengthen your desire to systematically study chess and bring you real pleasure. In English, Spanish, German and Russian, the Publisher: Russian Chess House File will be sent to your email address. It can take up to 1-5 minutes before you get it.
